

# Q-SIP-to-H323 Translator™

*A standalone server that transparently and seamlessly converts a SIP-compliant VoIP call to one that is H323-compliant so as to be compatible with a H323-compliant softswitch, Gatekeeper or endpoint*

*Q-SIP-to-H323 Translator is designed to enable H323-Compliant Service Platform to interoperate with SIP-compliant endpoints*

## Application Diagram

## Physical Description

Q-SIP-toH323 Translator is built in a robust industrial grade server running Linux 9.0 operating system in a 19"-rack-mountable metal chassis. Customer may specify the capacity of the components of the server hardware to suit the intended application.
