

Q-Outlook™

Integrated Web-based administration and configuration tool for Q-Regime™ and Q-SIPIQ™ servers, make management a much easier task for ITSP administrators and operators using Q-ITSP™ service platform

Functions

- General system parameters setting such as H323ID, signaling address and port
- Creation of endpoints and terminations
- Setting parameters for language selection, number processing, routing selection, etc.
- Radius configuration for carrying out AAA procedures
- Display real-time call status information and provide searching function

Outstanding Features

- Integrated and unified administration and configuration for Q-Regime and Q-SIPIQ servers (QPMD, Q-SIPIQ, Q-IVR)
- Web-based interface, easy to use and no Linux command expertise needed for operators
- "Template" for creating and configuring endpoints
- Multiple levels of access and administrative privileges
- Administration and configuration can be carried out remotely from a PC that runs web browser and has Internet access
- Management of multiple Q-Regime or Q-SIPIQ servers at the same time
- Real-time call monitoring, providing detailed call information such as connect time, elapsed time, caller, called number, etc.
- Online help file

The image displays three overlapping screenshots of the Q-Outlook web interface. The top-left screenshot shows the 'Termination' configuration page with fields for Termination Name (ecocamer191), IP Address (206.44.10.239), Max Call (100), Proxy Mode (3), Revenue Rules (1161 = 14161), and Prefix. The middle screenshot shows the 'Endpoint' configuration page for 'User Agent' with fields for Endpoint Name (qiqcanada1), IP Addr (74.66.102.237), Port (5060), Max Call (50), Radius Name (%usenput), and various routing and numbering fields. The bottom-right screenshot shows the 'Call Management - Call Monitoring' page with a search bar and a table of call records.
